
Paired checkpoints, fixed localization $\gamma = 100$; error bars: twice between-run SE
Free energy $F = -\log Z$
Precision τ
Open: >75% evidence from one run
factored, N=128, longer HMC
factored, N=128, shorter HMC
factored, N=256, shorter HMC
joint, N=128, longer HMC
joint, N=128, shorter HMC
joint, N=256, shorter HMC
$\Delta F/\Delta \log \tau$
Precision τ (interval midpoint)
Endpoint mean energy $\tau E[\Delta K]$
Precision τ
factored: earlier MCMC
joint: earlier MCMC
